COMPANY SAVES BUSINESSES TIME AND MONEY**

AYUDA LLC to Offer Individualized NCCER Services for Pipeline and Construction Industries

(OKLAHOMA CITY, Okla., Feb. 11, 2008) – Established in January 2008, [AYUDA Assessment, Training, Consulting & OQ, LLC](#) works with the [National Center for Construction Education and Research](#) (NCCER) in using the Contren Learning Series, National Craft Assessment and Certification Program (NCACP) and the Pipeline Training Program (PTAP) to streamline Operator Qualification services; assess construction and pipeline training needs; and create individualized, in-house training and certification programs. With a staff of highly qualified construction and pipeline industry professionals, and NCCER-certified members, AYUDA provides businesses a third-party resource that will ultimately save them time and money.

“Training and certifying new staff members and keeping up with NCCER guidelines takes a great deal of time, energy and resources,” said Melinda Traynor, principal and owner, AYUDA LLC. “That’s where we come in. We have the credentials to maintain compliant records, help with audit organization, and schedule customized NCCER training classes and assessment sessions, which frees business owners to concentrate on other aspects of operating a profitable company.”

AYUDA LLC Services include:

- Craft and Pipeline Assessments, performance verification, training and Operator Qualification Services
- Training services, including validating programs, identifying employee skills and pinpointing training needs
- Department of Transportation (DOT) compliance support services
- Foreign-born worker services

“AYUDA is Spanish for ‘help,’” added Traynor. I started this entire business concept because there are hundreds of companies out there that need a nationally-recognized industry credentials and training help. I have the credentials, knowledge and experience to close this gap.”

Traynor has more than 25 years combined experience working in the construction and pipeline industries; for the last 15 years, her emphasis has been on training and education.
